

PlumbSafe

DISEASE PREVENTION PROGRAM

PlumbSafe is working with the plumbing industry to identify the key disease risks and develop practical prevention information specifically for plumbers and apprentices.

KEY HEALTH RISKS IN PLUMBING

These are some of the key health risks we're focusing on:

Silicosis and respiratory illness

Legionnaires' Disease

Asbestos-related disease

Leptospirosis from contaminated water and soil

Hepatitis and infections from sewer work

Gastrointestinal infections from stormwater

Carbon monoxide poisoning

Dermatitis and eye infections

Tetanus

Chemical exposure

Lead exposure

Welding fumes

WE WANT TO HEAR FROM YOU

The PlumbSafe survey will help us understand:

- 1 What are the biggest health risks in plumbing?
- 2 Where are the gaps in current information?
- 3 What prevention information would actually help on the job?
- 4 How should this information be delivered to employers, plumbers, apprentices and the industry?

GOT A FEW MINUTES?

Take our short survey to help shape the future of our industry.

Your responses are confidential and anonymous.

No names or personally identifying information will be collected.
